1. As a user, I want to have separate portals - one for buying and one for selling with different UI, so that I can distinguish between them and perform specific actions based on my intentions.

2. As a student buyer, I want the student seller's contact information, so I can contact the seller easily for any queries.

3. As a student buyer, I want to send an "In-Person Inspection Request" to the seller with instant purchase, so that I can examine the product before making a purchase decision and purchase it on the spot if I like it.

4. As a student user, I want the option to participate in group purchases for educational resources like e-books, so that I can access these materials at a lower cost.

5. As a student, I want to earn bonus points with every sale or purchase that I make, so that I can boost my profile to levels like gold, silver, or platinum, showcasing my achievements and unlocking rewarding benefits.

6. As an admin, I want access to an admin page where I can manage user accounts, and monitor platform activity so that I can ensure the platform's smooth operation.
